

## US EPA approvals under the Safe Drinking Water Act correlated with SM edition numbers

The US EPA, under the Safe Drinking Water Act, lists methods that can be used to evaluate specific analytes. The EPA provides the method number and the approval year. Although the US EPA approves only one method, states may provide the option to laboratories to use prior methods.

To locate the edition in which a specific method appears, find the relevant method number in the left column and read across to locate the version noted by the EPA. Some versions appear in more than one edition of *Standard Methods*.
